

Motion29 Launches New 7/8” Moulded Connectors Suitable for Harsh Industrial Environments

A new range of circular 7/8” moulded connectors has been introduced by industrial engineering solutions company, Motion 29. Capable of carrying a current of 12 Amperes at 300 Volts, as well as low level signals for instrumentation, the Shield connector is available with 3, 4, 5, 6 and 14 poles and comes in both male and female versions.

7/8” connectors were first utilised in the 60's by the automotive industry for use on their production lines as they made the replacement of solenoid valves and limit switches much easier. Since then they have become a vital component for distributing power and data in industrial automation applications.

Motion29, the Welsh based company which specialises in providing industrial connectivity solutions, insists on sourcing products that are simple to use, robust and which eliminate down and error time.

“We have worked closely with Shield to devise a connector solution for every possible application”, explains Motion29 director, Andrew Wilkinson, “The new range is available with either a straight or moulded body and in a choice of Polyurethane or PVC cable. A wide selection of receptacles for the connectors is available to fulfil all the requirements of the end user.”

Motion29's new range is compatible with existing 7/8” connectors on the market and is designed to withstand harsh industrial environments. Rated waterproof to IP68 the 7/8” connector offers a competitively priced solution for many industrial applications.

Notes to editor:

Motion29 was established in 2006 by Steve Fisher and Andrew Wilkinson to serve the industrial and mobile automation markets with safety, indication, connectivity and remote controls systems.

In addition to supplying off the shelf product, Motion29 specialises in developing and supplying value engineered solutions to meet customers' specific requirements, with full after sales technical service and support.

The company is located in the Woodfieldside Business Park in Blackwood, Wales, where they manufacture safety edges to customers' requirements as well as undertaking the customisation of connectors and other products.
