

DISTRIBOX® - World's Most Flexible Passive Distribution Box Out Now

Distribox® is a brand new range of passive distribution boxes which boasts the largest number of outputs and advanced flexibility to combine both sensors and valves connectivity in a single box.

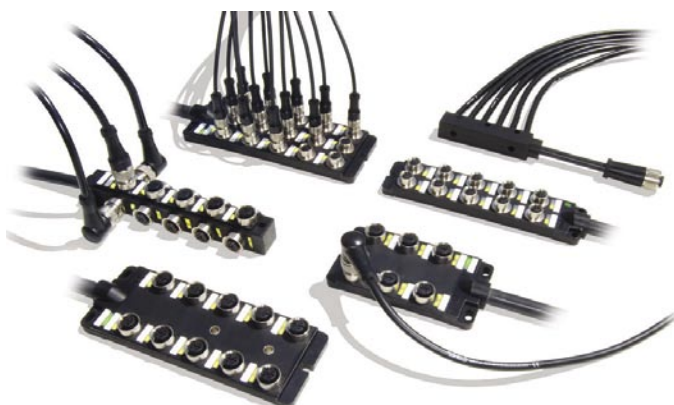

The Distribox® range was born of a collaboration between Shield and bespoke industrial solution experts, Motion29. The two companies identified a need to offer the end user a line of flexible options to fulfill even their most complex distribution needs. The resulting Distribox® range offers a choice of 3 box formats: Classic Top Mount, Compact Top Mount (available with choice of M12 or M8 connectors) and Side Mount (M12 connectors), all of which have single or twin I/O.

This new family of distribution boxes offers more port versions than any other on the market with 4, 6, 8 and 10 ports available. Additionally, the Classic Top and Side Mount boxes can be specified with an extra row of connectors meaning that 6, 9, 12 and 15 port versions are also available making this range of products unique in the market.

Each box has a power and status LED indicator integrated into the design to help diagnose problems and errors. This not only reduces installation time but also enables unskilled staff to monitor the machinery effectively.

“We are very excited about bringing this new range into the marketplace” says Andrew Wilkinson of Motion29, “Splitter boxes were not previously available with this number of port options and side mount splitters were extremely difficult to get hold of, despite being in high demand. We are also offering the full range of M8 and M12 connectors to support the new products.”

At only 30mm wide the Compact Top Mount series is ideal for situations where space represents the main limitation and their reduced size even allows them to be mounted onto a machine's frame. The Classic series meanwhile, at just 50mm wide, has the largest number of output to space ratio and allows improved machine assembling definition.

Distribox® boxes are sealed waterproof to IP67, have corrosion resistant nickel plated brass coupling and are moulded out of chemical resistant polyurethane (PUR). Write on labels allow for port or function identification and PUR home run cable is supplied with the product in a variety of different lengths.

Notes to editor:

Motion29 was established in 2006 by Steve Fisher and Andrew Wilkinson to serve the industrial and mobile automation markets with safety, indication, connectivity and remote controls systems.

In addition to supplying off the shelf product, Motion29 specialises in developing and supplying value engineered solutions to meet customers' specific requirements, with full after sales technical service and support.

The company is located in the Woodfieldside Business Park in Blackwood, Wales, where they manufacture safety edges to customers' requirements as well as undertaking the customisation of connectors and other products.

Providing the solutions to your problems!
